US GREEN BUILDING COUNCIL LEED RATING STATEMENT

Based on a review of the current LEED rating system for product eligibility for door hardware, Detex Corporation states the following:

Materials and Resources: Recycled Content

Program	Checklist	Credit	Requirement
LEED-NC LEED-CS LEED-S LEED-CI	Materials and Resources	Recycle Content MR4.1	For this credit, use materials with recycle content such that the sum of the post-consumer recycle content plus 1/2 of the pre-consumer recycled content constitutes at least 10% of the total value of the materials in the project.
LEED-NC LEED-CS LEED-S LEED-CI	Materials and Resources	Recycle Content MR4.2	For this credit, use materials with recycle content such that the sum of the post-consumer recycle content plus 1/2 of the pre-consumer recycled content constitutes an additional 10% beyond MR4.1 (total of 20% based on cost) of the total value of the materials in the project.

Post-consumer material is defined as waste material generated by households or by commercial, industrial and institutional facilities in their role as end-users of the product, which can no longer be used for its intended purpose.

Pre-consumer material is defined as material diverted from the waste stream during the manufacturing process. Excluded is reutilization of materials such as rework, regrind or scrap generated in a process and capable of being reclaimed within the same process that generated it.

Detex Product	Post-Consumer Recycled-Content *	Pre-Consumer Recycled-Content **	Total LEED Recycled Content Percentage
Advantex	34%	0%	34%
Value Series	35%	0%	35%

* Recycled Content defined in accordance with industry standards

**Pre-consumer recycled content refers to waste material that is immediately placed back into the production cycle. Waste materials generated by the production of these products are collected and shipped off site where it then re-enters the recycle stream
