FOR SPECIAL LOCKING ARRANGEMENT:
THIS PRODUCT MUST BE CONNECTED INTO A FIRE ALARM SYSTEM PER NFPA CODE OR OTHER REGULATIONS SO THAT, IN THE EVENT OF FIRE, THE TIME DELAY WILL BE BYPASSED. CONTACT YOUR LOCAL CODE AUTHORITY TO VERIFY COMPLIANCE WITH FIRE AND BUILDING CODES. THE DELAYED EGRESS DEVICE SHOULD BE ROUTINELY CHECKED FOR PROPER OPERATION AND COMPLIANCE WITH FIRE AND BUILDING CODES.

For device installation videos,

MORTISE CYLINDER INSTALLATION

PRECAUTIONARY NOTES:
1. Be careful when installing fillerplate assembly not to damage modular cable.
2. See "EE ELECTRICAL OPTIONS" before reinstalling filler plate.

Remove endcap, endcap bracket & fillerplate subassembly.
Disconnect the following:
- Cable assembly (view A),
- 12 pin connector (view B),
- Magnet connection (view C),
- Mortise device plug (view C if applicable),
- Surface Vertical Rod (SVR) device plug (view D if applicable)
- Battery connection

(note: board layout may differ slightly from layout shown)

2 INSTALLING MORTISE CYLINDER
Install mortise cylinder onto new fillerplate subassembly

NOTE:
1. Move placement of spacers to match length of cylinder used to allow smooth rotation of cam.
2. All cylinder spacers must be used, either on top or bottom

CAUTION:
Tighten with hand tools only.
Do not overtighten

Install mortise cylinder with hex nut provided
Dogging lever should be in "ON" (CCW) position before sliding back into extrusion

3 RE-INSTALL FILLERPLATE

Re-connect in the following order:
1) Cable assembly (view A),
2) Battery,
3) 12 pin connector (view B),
4) 2 pin connector (view C),
5) Mortise plug (view C) or SVR plug (view D) if applicable.

EE Cable/Wire connections IMPORTANT!
Refer to pages 4 & 5 for EE wiring instruction
**STEPS 1 THRU 5 BELOW FOR MORTISE DEVICE ONLY**

1. **Use backplate for marking & drilling cable hole**
   - Mark and drill 1/2" dia hole thru device side of door
   - **CAUTION:** Mortise lock should NOT be installed when drilling

2. **Route modular cable thru door**
   - (Cable packaged with Mortise Lock)
   - Small end
   - Route cable thru mortise lock cutout
   - Drilled hole

3. **Plug modular cable to mortise lock**
   - **CAUTION:** Be careful when feeding lock and cable back into door
   - Plug cable to mortise lock BEFORE installing lock to door

4. **Install device**
   - Fillerplate
   - See previous page
   - See step 5

5. **Plug cable to coupler**
   - **LHR**
   - **RHR**
   - Slide endcap assembly onto extrusion

**CHECKING FOR DEVICE CLEARANCE**

(Cut-Off procedure if required)

1. **Cut fillerplate and extrusion STRAIGHT & SQUARE to desired length and deburr**
   - Secure with tape before cutting

2. **CAUTION:** Check for device and door frame clearance.
   - If no cut-off needed, proceed to the next page

</table>

For aluminum Advantex finish cutdown applications:
After cutting, the baseplate extrusion can be reversed to place the cut end inside the head cover.
To do so, loosen the setscrew inside the aluminum baseplate extrusion and slide extrusion out, reverse, & slide back in. Tighten setscrew.
ELECTRICAL OPTIONS

REQUIRES DETEX POWER SUPPLY

REQUIRED WIRE SIZES:
STRANDED WIRE GAUGE: 18 AWG MIN
MAXIMUM LENGTH OF TWO CONDUCTOR CABLE: 40 FEET

90-800 Power Supply with Detex Delayed Egress device

Detex requires one fire alarm relay per power supply.
Closed Fire Alarm Loop (must be supplied for power output)

From (+) terminal to pin #1 on exit device
RED/BLK WIRES TO 24 VOLT
BLK RED

From (-) terminal to pin #2 on exit device

To Exit Device Door #1

FACTOR INSTALLED JUMPER

To disable the low-battery indication, slide the Dis Lo Bat switch to 'ON'
Red wires to Internal solenoid
DO NOT ADD POWER!
(PC BOARD ASSEMBLY INSIDE DELAYED EGRESS DEVICE)

9V Alkaline Battery

NOTE:
Surface Vertical Rod & Concealed Vertical Rod device will have battery plug-in & 6 pin plug in place of battery plug-in & 2 red wires

DETEX REQUIRES THE POWER SUPPLY BE LOCATED WITHIN 40 FEET OF THE DEVICE

To Exit Device Door #2 (if req'd)

NOTE:
Mortise devices ONLY (PWA p/n 104576) will have this additional plug-in connector

104877 Page 5
RIM EE BOARD SHOWN
ELECTRICAL OPTIONS
L9= Less 9V battery
SI= Status Indicator

POWER REQUIREMENT:
.5 AMPS @ 24 VDC

The key cylinder arming switch must be set to "OFF". To prevent the alarm from sounding during installation, attach battery AFTER main power is applied.

Delayed Egress Device requires a connection to the Fire Alarm System.
The fire alarm connection needs to be made Externally at the Power Supply.
During a fire alarm condition the delayed egress will be deactivated.

MAIN POWER CONNECTION: (1 AND 2)
See Power Supply instructions

DETEX REQUIRES USING THE FIRE ALARM
CONNECTION IN THE POWER SUPPLY:
CLOSED connection is provided from the fire alarm system when not
in-alarm and OPEN when in-alarm. See power supply instructions
for details.

REMOTE BY-PASS: (5 AND 6)
Connect normally open (N.O.) contact.
When the contact is closed momentarily, this will allow the door to open
without the alarm sounding. The unit will automatically re-arm in 15
seconds after the door is closed (three quick audible beeps).

BY-PASS RELAY: (7,8 AND 9) DRY contact output.
The BY-PASS relay is energized when the unit is disarmed by
the KEY or REMOTE BY-PASS to indicate to a remote indicator
that the door is not armed.

ALARMS RELAY: (10, 11 AND 12) DRY contact output.
The ALARM relay is energized when the unit is sounding its alarm
to indicate to a remote indicator that an unauthorized exit has been attempted.

OUTSIDE KEY CONTROL
If the OKC option is used, the outside key bypasses and rearms the alarm.

STATUS Indicator (SLIDE SWITCH)
ON: Green LED blinks every three seconds when the unit is disarmed.
Red LED blinks every three seconds when the unit is armed.
OFF: No status indication

9V Alkaline Battery connection
(for alarm back up only)
Must have 24V for full functionality.
RISER DIAGRAM

DETEX FILTERED AND REGULATED POWER SUPPLY WITH FIRE ALARM SYSTEM LOOP 24 VDC @1 AMP min.

DETEX REQUIRES THE POWER SUPPLY BE LOCATED WITHIN 40 FEET OF THE DEVICE

PLACE ECL-395 SIGN ON DOOR

PROVIDE WIRING CONDUIT, CONNECTOR, ETC BETWEEN DETEX POWER SUPPLY AND FIRE ALARM CONTROL PANEL AS REQUIRED TO ALLOW THE FIRE ALARM SYSTEM TO OVERRIDE THE DETEX DELAYED EGRESS FEATURE DURING A FIRE ALARM

THE LOSS OF POWER OR OPEN FIRE ALARM CIRCUIT WILL ELIMINATE THE DELAY EGRESS OPERATIONS

REQUIREMENTS:
MIN. 22 GA STRANDED WIRE FOR SIGNALING
MIN. 18 GA STRANDED WIRE FOR POWER

REFER TO WIRING & FIRE ALARM DIAGRAMS FOR WIRING INSTRUCTIONS

Care and Maintenance:
The Detex Advantex® devices are designed to provide many years of maintenance free service under normal usage. Periodically inspect and lubricate the unit to extend its life.

(HLR rim device shown)

HARDWIRE TRANSFER OPTIONS

Electric Hinge
p/n: EWH8-626

Power Transfer p/n:
PT-5 or PT-56C
(includes cable)

Flex Conduit/End Cap Kit
p/n: FC3EC1 (EC1 shown)
(specify finish when ordering)

Electric Hinge Endcap Prep

Wire chase through door

1/2" Hole through the inside door face

Power Transfer Endcap Prep

Wire chase through door

1/2" Hole through the inside door face

Flex Conduit Endcap Prep (EC1 shown)

Note: For high traffic areas an electric through-wire hinge or power transfer is recommended.
ARMING AND AUTHORIZED EXIT
With door closed, insert key in the cylinder, turn CCW, then back to the home key position and remove it. LED glows green. Authorized personnel can exit the door during the arming delay.
After a 15 second (default) arming period, alarm issues three quick beeps and LED goes off, indicating that the unit is armed.

DISARMING
Insert key, turn CW to a stop. Green LED will blink twice to indicate the unit is disarmed.

EXITING UNDER ALARM
To exit, push and maintain pressure on the pushpad.
After a one-second delay, (nuisance delay) LED flashes RED and alarm pulses on and off for 15 seconds.
After 15 seconds, alarm issues short and long pulses to indicate that one can exit by depressing the pushpad.
Alarm sounds continuously and LED is steady RED.
Turn key CW to stop alarm. In case of fire, the fire alarm over-rides the 15 second delay and the door opens without delay when the pushpad is pushed.

NUISANCE DELAY
When pushpad is depressed for less than 1 second, alarm will emit a single pulse but will not start delay function.

BATTERY BACKUP FOR ALARM (configurable)
A 9-volt battery is included as a backup power source for the alarm siren if power is lost. To disable low battery indication, slide the Dis Lo Bat switch to 'ON'. See page 9 for location.

LOW BATTERY INDICATION
If battery voltage is low(7 volts or less), unit remains armed but LED flashes RED and unit beeps twice every 45 seconds. Replace battery as soon as possible.
