Top level p/n: 85-800  
Top level dwg #: 104050

Part number 85-800 includes:  
Controller: 104055-X  
Remote Interface Unit (RIU): 103823-X  
EExER to Remote Interface Unit Cable: 103843  
EExER to Device Power Supply Cable (2 qty): 103844-X  
Optional: Remote Interface Unit Tamper Screw Kit: p/n SSK4 (drawing 103827)

85-800 CONTROLLER / POWER SUPPLY

Description of use:  
For use with dual door Delayed Egress  
with Latch Retraction devices (EExER)  
Input requirements 120v @ 2 amps  
For International orders:  
Input requirements 240v @ .8 amps
WARNING! DEVICE MAY CYCLE WHEN FIRST POWERED UP. KEEP HANDS AND FINGERS CLEAR OF MOTOR AND CAM.

MAIN POWER PANEL

The 85-800 is a controller / power supply. The power supply boards are configured for 24VDC.

Refer to the appropriate drawing for connections and adjustments. All connections and adjustment must be made with the power supply de-energized AND main power switch (item 3) in the OFF position.

1: MAIN POWER CONNECTION.
Observe correct terminal connections. Color code requires connections made per NFPA72. Leave circuit de-energized while installing and servicing unit.
2A & 2B: FIRE LOOP CONTROL.
Connect the two wires from the building fire system relay to these terminals on power board "A". The power supply will operate normally as long as the connection between the (-) and (C) is maintained. When the building fire alarm system opens the circuit, the power supply de-energizes the output voltage. The fire loop uses 24 volt sense voltage. Power board "A" must have connection to the building fire safety system. Connection for power board "B" is optional. Fire alarm relay is required for power board "B" on fire rated openings. NOTE: Each power supply should have an Independent fire alarm relay.

3: MAIN ON-OFF SWITCH,
This switch can be used to de-energize the power supply for service and adjustments. High voltage is still present inside the enclosure as long as the main power feed is energized, so caution should still be used when service is performed using this switch.
I = ON, O = OFF
Yellow LED = SYSTEM OK
Green LED = NO DC OUTPUT
No LED = No AC input

4: 1.5 AMP TIME DELAY FUSE (5 x 20mm).
This is intended to protect the device against high current loads and is part of the AC input circuit. Both power boards use this fuse.
Detex p/n is 104267-2.
Bussman p/n is GMD-1.5A
Littlefuse p/n is 023901.6HXP

5: OUTPUT VOLTAGE.
Both boards are factory set for 24volts.

6: OUTPUT TERMINALS are pre-wired at factory (6A / 6B).

DOOR CONTROLLER PWA

7: POWER GOOD INDICATOR.
This LED will glow green if 24 volts is supplied to the controller board.

103167 Page 3
8: ACCESS CONTROL INPUTS.
These require a normally open dry contact. The door latch will activate and hold once the circuit between the terminals of inputs 1, 2 or 3 is made.

9: DOOR HOLD DELAY ADJUST.
This potentiometer adjusts the length of time the latch is held retracted once the input switch is released. Turn clockwise to increase the latch hold time up to a maximum of about 30 seconds. TROUBLESHOOTING INFO: When adjusted to minimum, latch retraction may not function properly.

10: AUXILIARY OUTPUT INDICATOR.
D1 glows red when the auxiliary output is active.

11: DOOR 1 OUTPUT ACTIVITY INDICATOR.
D2 glows red when the output voltage to the latch retraction device is energized.

12: DOOR 2 OUTPUT ACTIVITY INDICATOR.
The LED glows green when the output voltage to the latch retraction device is energized.

13: DELAY EGRESS TO LATCH RETRACTION DIFFERENTIAL ADJUST.
R5 is used to adjust the delay between the delay egress release and ER latch retraction. The delay is factory adjusted and should work correctly for most applications. The delay is adjustable from .25 to 1 second by R5. This is factory set and should not require adjustment. If a longer delay is needed, turn R5 clockwise.

14: DELAY BETWEEN EACH DOOR RETRACTING.
Potentiometer R21 adjusts the delay time between the latches being retracted on door 1 & door 2. It is set at the factory and should not require adjustment. Should a longer delay time be required, turn R21 clockwise to increase. Note: Additional relay is needed for door operator.

Door 1 to Door 2 Delay
Time is adjustable from 0.5 to 3 seconds
15b: DOOR SIGNAL MODULE. STANDARD (KIT P/N 104048)
A door signal to control a door operator.
(Not evaluated by UL)

15a: OPTIONAL 12 VOLT POWER MODULE. M12 KIT (P/N M12)
An optional 12 volt power supply module is available where a 12 volt
DC source is needed in addition to 24 volts. See the kit instructions for
more information. 300 mA max current draw.
(Not evaluated by UL)

Optional Module
Optional 12 volt supply module
plugs onto P1 and JP1. Plug
is keyed for alignment, do not
force. Order DETEX catalog
number: M12

WARNING! DEVICE MAY CYCLE WHEN FIRST POWERED UP
KEEP HANDS AND FINGERS CLEAR OF MOTOR AND CAM

DELAYED EGRESS CONNECTION BLOCK

16: BYPASS RELAY OUTPUT: (7, 8, and 9)
The BYPASS relay output is energized when the unit is disarmed by the KEY or
REMOTE BYPASS to indicate to a remote indicator that the door is not armed.

17: ALARM RELAY OUTPUT: (10, 11 and 12)
The ALARM relay output is energized when the unit is sounding its alarm to
indicate to a remote indicator an unauthorized exit has been attempted.

18: MASTER SWITCH.
This switch is intended for service and setup use. When it is set to "ON" the LED
tip will glow red. This indicates the delayed egress and exit alarm are set to
normal control and function. When set to "OFF", the delayed egress and alarm
functions are bypassed and the LED tip will glow green.

19. DELAYED EGRESS CIRCUIT BOARD.
There is an arming delay of 15 seconds (other times are factory optional)
between the unit being placed in the armed state and the delay egress becoming
active.

NOTE:
18 AWG wire is recommended for power circuits.
22 AWG wire is recommended for signalling circuits.
REMOTE INTERFACE
INSTALLATION INSTRUCTIONS

1. Mark Box Location:
(surface installation shown)
Mark (4) holes

2. Pick best knockout location
for routing wires.

3. Route wires through
knockout.

4. Mount box
Recommended drill size
for anchors: 1/4 diameter
Press-in wall anchors

BACK BOX MUST BE GROUNDED PER
NFPA 70

#6-32x1-1/2"
Machine screw
P/N: 102866-14

Cylinder nut
P/N: 100783

RUI circuit board kit
P/N: 105083

Cover
P/N: 105430-1 (Gray), 105430-2 (Black)

Cam assembly kit
P/N: 102660-1

Ground Strap
P/N: 104448

#4-20x1-1/4" Plastite screw (qty 3)
P/N: PP-5374-48

Tamper bracket
P/N: 102701

#4-20x1-1/4" Plastite screw (qty 1)
P/N: PP-5374-48

#8-32 Truss HD screw
P/N: 102627-15

NOTE: Switch and cam assembly
not used with dummy cylinder.

Figure 1. Parts breakdown depiction
6 KEY STOP INSTALLATION (if required) - Optional
(Key stop set screw included in hardware kit)

**Hardware Kit**
P/N: 103824 Includes Keystop parts
P/Ns: 105770-1 (KS), 105770-2 (KS2), & screw P/N 101976-1

**Front View**
**KEY STOP POSITIONS**

"ON" position
(Key can be removed)

KS shown

KS used with standard Yale style cam

Key shown in 90° stop "ON" position

"OFF" position
(Key cannot be removed)

KS2 shown

KS2 used with Adams Rite small style cam

Key shown in "OFF" position

**Back View**

Cam orientation for Key Stop option
7 SELECT S2 POSITION
(if required)

Slide S2 to "ON" for use with key cylinder, "OFF" for use with dummy cylinder

8 CONNECT WIRES FROM CABLE TO TERMINAL BLOCK

6 Pin Plug to Remote Interface

6 Conductor cable from power supply to Remote Interface terminal strip p/n 103843

Ground strap from cable (must be connected)

Back box MUST be grounded by conduit or other means

Grounding strap: supplied with device

Grounding wire required. Minimum 10 ga stranded wire NOT SUPPLIED

If only 1 panic device is installed, install jumper across blue & green terminals in un-used terminal block

EExER Device

Pigtail provided for pre-wired installations

power Supply Cable
Default 1 ft, p/n 103844
Optional for 20 ft, p/n 103844-2

9 VERIFY GROUND STRAP CONNECTION

10 Install device with (4) #8-32 machine screws

6-32 Screws from Hardware Kit
(Tamper Screw kit P/N: SSK4)

Detex supplied or use Red Dot box
Part no: Red 2H3-1

Detex supplied or use a standard
4" x 4" x 2-1/2"
double gang outlet box

NOTE: The Electric Latch Retraction (ER) function is operated by an external entry/exit control device (such as card reader) that is connected to the power supply. Install per Manufacturers instructions.
DELAYED EGRESS OPERATIONS

ARMING AND AUTHORIZED EXIT
With the door closed, insert key in the cylinder of the remote interface, turn CCW, then back to home key position and remove. Two red LED flashes occur, then green LED glows. Authorized personnel can exit the door during this rearming cycle. After a 15-second arming period, alarm issues three quick beeps and LED goes off, indicating the unit is armed (see table 3 for status options).

If a key cylinder is not used, the device is set to an armed state by default and only the three system control inputs on the ER control board (uses a normally open dry contact, closed to activate) can be used to bypass the alarm.

DISARMING
Insert key, turn CW to a stop. Green LED will blink twice to indicate the unit is disarmed, (see table 3). Device will operate as a normal exit device. If the key cylinder is not used, closing the contacts of one of the three system control inputs will activate the latch retraction mechanism and bypass the alarm.

Upon release of the input contact, the latch will release, and the 15 second arming delay timer will start. The unit will issue three beeps, indicating the unit is now armed.

EXITING UNDER ALARM
To exit, push and maintain pressure on the pushpad. After a one second delay, (nuisance delay), LED flashes RED and alarm pulses on and off for 15/30 (not field programmable). After 15/30 seconds, alarm issues short and long pulses to indicate that one can exit by depressing the pushpad. Alarm sounds continuously and LED is steady red. Turn key CW to stop alarm or initiate authorized access.

In case of fire, the fire alarm over-rides the 15/30 second delay and the door opens without delay when pushpad is pushed. The alarm will not sound since the power to the system is turned off in response to the fire alarm.

RESETTING THE ALARM
Turn key CW to reset the alarm. See the arming procedure above to rearm the device. If the key cylinder is not used the alarm must be reset by using one of the three system control inputs on the ER control board. The latch will retract and the alarm will turn off. Upon release of the system control input contact & retract time, the unit will start the 15 second arming delay timers, and will automatically rearm at the end of that time. In case of fire, the fire alarm overrides the 15 or 30 second exit delay and the door opens when the pushpad is pressed. The alarm will not sound since the power to the system is turned off in response to the fire alarm.

NUISANCE DELAY
When pushpad is depressed for less than 1 second, alarm will emit a single pulse but will not start delay function.

NORMAL OPERATION
