GENERAL INFORMATION
The VRA-143 vertical rod assembly is designed for use on double doors in conjunction with the following Detex product:
Exit Control Lock Model ECL-230D.

NOTE
To locate the mounting holes for the ECL-230's and the VRA, use the templates provided with these instructions and disregard the templates provided with the ECL-230's.

The ECL-230's and the VRA can be used in any of the three arrangements shown.

Outside Key Control (OKC)
An OKC can be used on the active leaf of a type 'C' installation.
An OKC can also be used on a type 'B' or type 'D' installation but for entry only.

TOOLS AND SUPPLIES REQUIRED
Center punch to mark hole centers
Hammer
Drill motor and bits
Tape to fasten templates
Tape measure
Screwdriver, blade type
7/8" diameter drill
1" diameter drill
#10-24 tap

FIGURE 1, TYPE B
Active leaf opens both doors.
Overlap plates installed on the inactive leaf.

FIGURE 2, TYPE C
Either leaf opens first.
Strike plate installed on VRA door.
Lock on leaf without VRA must be ECL-230.

FIGURE 3, TYPE D
Each leaf is independent.
UPPER AND LOWER STRIKES
Follow the instructions on the strike templates and mark the hole centers as shown. Produce a hole in the door frame and in the floor or threshold, about 3/4" deep. Drill the strike mounting holes.
Install the upper strike plate making sure that the raised flange is toward the door as shown in figure 5. Install the lower strike plate.

BASE ASSEMBLY
Refer to figure 7 and install the base assembly on the door, oriented as shown, using four pan-head screws, 1" long. If a type-C installation, install the closed-back strike at this time. (The strike fits under the base assembly).

LOWER ROD ASSEMBLY
Refer to figure 7 and assemble the lower rod (39”), jam nut, lower bolt, bolt housing, (open end down), and rod guide. The lower bolt will be adjusted later.

UPPER ROD ASSEMBLY
Refer to figure 7 and assemble the upper rod, bolt housing, (open end up), upper bolt and rod guide. The upper bolt will be adjusted later.

INSTALL LOWER ROD
Install the lower rod assembly as follows. Insert the upper end of the rod through the hole in the bottom of the base assembly and lower it until the lower bolt enters the lower strike plate. Insert a cotter pin in the bottom hole in the rod. Slip a spring then a washer onto the upper end of the rod and insert the end of the rod in the link in the base assembly. Fasten the rod to the link with a knurled head pin.

INSTALL UPPER ROD
Insert the lower end of the rod into the hole in the top of the base assembly. Slip a spring and washer onto the lower end of the rod and insert a cotter pin in the second hole from the bottom of the rod. Attach the rod to the link in the base assembly with a knurled pin.

BOLT ADJUSTMENT
To make the required adjustments, temporarily install the VRA handle on the square shaft in the base assembly. Turn the handle counterclockwise to the locked position and check the top and bottom bolt positions. The upper bolt must be adjusted so that the flat on the top side is butted to the upper strike plate as shown in figure 5. Adjust the bolt by screwing or unscrewing the rod. If the rod is too long, refer to figure 7 and cut the rod as shown.
The lower bolt must be adjusted so that the bolt enters the lower strike plate as shown in figure 6. Adjust the bolt by screwing or unscrewing it on the rod. Tighten the jam nut on the lower rod. When all the adjustments are complete, operate the VRA handle to make sure that the mechanism works freely and the top and bottom bolts enter the strike plates properly when locked. Make sure that the top and bottom bolts clear the strike plates when the rods are retracted. Replace the temporary screws in the top and bottom bolt housings with "one-way" screws.

**INSTALL COVER**
Remove the VRA handle and install the cover with two pan-head screws, 1/4" long. Install the handle.

**INSTALL ECL(S)**
Refer to the instructions provided with the ECL-230 and install the products(s). If a type-C installation with an OKC, install the cylinder before installing the ECL-230.

**OVERLAP PLATES**
If a type-B installation, install the top and bottom overlap plates with two one-way screws and two Phillips-head screws each. See figure 7.
